

## What is mapping and why is it important?

Humanitarian Mapping is the creation of digital maps of the "hidden" places of the world through crowdsourcing.

**Many parts of the world's most vulnerable places are not mapped.**

Humanitarian crises such as natural disasters, disease outbreaks, epidemics or conflicts hit particularly hard when the ground situation is unknown.

Our group aims to proactively map the places in the world where the most vulnerable people live before a crisis occurs, and participate in the emergency response to an active crisis.

**When you map, you're solving real world data challenges for NGOs helping with:**

Medical supplies  
+ logistics

Infectious diseases  
e.g. Ebola

Vaccination  
campaigns

Waterborne diseases  
e.g. cholera

Hurricanes

Malnutrition

Flooding

Earthquakes
